

Animal Crossings

Activity designed by TWU OT Students
Inspired by *My Curves are Not Mad* by Richard Serra

 PLEASE DO NOT TOUCH THE ART. 

Needed supplies: ear plugs, binoculars, pencils

Artist Richard Serra usually begins his designs with a model instead of a drawing. He likes to think about the relationship of elements he finds interesting to invent a new way to look at them.

His sculpture, *My Curves Are Not Mad*, is made up of two plates from Cor-Ten steel, a weather-proof material. Each plate is 14 feet tall, 44 feet long, and weighs over 50,000 pounds. That weight equals almost 8 African bush elephants!

Through this piece, Richard Serra allows us to see various elements of sculpture from a different perspective. Walk through the sculpture and mimic the movements and abilities of the following animals to learn new ways you may move through a space!

Hear like a snake

Snakes do not have ears! Use your ear plugs as you walk through the sculpture and notice how the lack of sound makes you feel.

Move like a rabbit

Using your feet, hop up and down through the garden and notice how your body feels!

See like an eagle

Eagles can see more than 3 miles away! Using your binoculars, walk through the sculpture and see what new details you notice!

Reflection:

After completing the first activity, use this space to think about how you felt. You may circle the emoji that best matches your emotion or write down your feelings.
